

ABSTRACT OF THE DISCLOSURE

A method for receiving an identical broadcasting program automatically searches broadcasting channels to which an identical broadcasting program corresponding to a program of the channel selected by a user is transmitted from multiplex broadcasting media in case the broadcasting signals are poor or the broadcasting signals have high sound quality or picture quality while the user transmits a broadcasting program through a medium so that the user can watch the identical broadcasting program continuously. In order to achieve this, the present invention searches and outputs a broadcasting program identical to the multiplex broadcasting program from multiplex broadcasting media on the basis of a source ID of the broadcasting program received from broadcasting media.
